A Letter From the Administrator

Stellar Forum began as a leap of faith on people who deserved a seat at a table they hadn't been given yet; talented, capable individuals who needed a platform to prove what they achieve, if given a chance. It was driven by a fundamental conviction that potential shouldn't be limited by access, and that given the right environment, extraordinary people accomplish extraordinary things. That instinct defined our foundation, and it remains the guiding principle behind everything we build today.

Stellar Forum Summit is the next leap. We looked at the traditional conference space and saw an environment in need of true innovation, far too many rooms following the exact same routine and repeating the same outdated formats. Instead of building just another standard event, we built something entirely different in form: a three-day, full-scale simulation of space programs. It is an immersive, high-stakes experience designed to push boundaries, demand real collaboration, and give every participant a genuine taste of mission-critical execution.

None of this happens without a host team that deeply understands and owns what it is creating. Every operational detail, every program track, and every structural decision exists to make this vision tangible. This document exists so that everyone joining that team, regardless of your role or department, understands the underlying vision clearly enough to build it with us. We are asking you to approach this not simply as a series of tasks, but as shared ownership over something groundbreaking.

Let's build something historic now, together.

**Administrator,
Stellar Forum Summit
Muhammad Aliyan Akif**

To Whom it may Concern

“Planet Earth, you are a crew”

– Christina Koch

If you've stumbled upon this document, you're likely trying to figure out what Stellar Forum Summit is actually about or maybe you're just lost. Either way, welcome. Consider this a quick reality check on what we are building, minus the usual corporate buzzwords. Here is the deal. When people walk into a typical event, they expect things to just work. They expect the schedule to not run two hours late, the Wi-Fi to actually connect, the keynotes to not be painfully boring, and the badge at check-in to have their name spelled correctly for once. They rarely stop to think about why it works, but they definitely notice when it falls apart.

That is where the magic (and a frankly unreasonable amount of caffeine) comes in. Behind the scenes of Stellar Forum Summit is a full-scale operation running across nine different departments. We are talking about everything from venue logistics and financial modeling to graphic design, security, and making sure the evening socials are genuinely fun instead of deeply awkward. None of this happens by magic. It happens because a team of actual human beings puts in the unglamorous work long before anyone sets foot in a program room.

Whether someone is balancing a budget spreadsheet, designing media assets, directing crowd control, or greeting guests at the entrance, every single moving piece serves the exact same purpose: building the operational backbone of a simulated space mission. None of these roles are just background noise. They are the summit. To anyone participating, the experience inside the program rooms is only as real as the infrastructure supporting it.

We don't view this as a basic checklist of tasks to mark off, and neither should you. Because this is the very first edition, there is no dusty old manual to copy from, no safety net, and no "well, that's just how we've always done it" excuse to fall back on. Everything you see here is built from scratch by people who care enough to do it right.

So, if you were wondering what Stellar Forum Summit is all about: it is ambition, a bit of chaos, and a lot of dedicated people making something historic look completely effortless.

What is Stellar Forum?

Stellar Forum was only founded on a simple, uncompromising belief: talent is everywhere, but the opportunity is not. We exist as an organization dedicated to identifying and championing unheard, undiscovered, and underrepresented talent, specifically breaking down the financial and social barriers that keep extraordinary minds hidden in the background. Far too often, capable individuals are sidelined not by a lack of drive or intelligence, but simply because they lack the network, sponsorship, or access required to enter the room. Stellar Forum was built to close that gap permanently.

Rather than letting genuine capability go unnoticed, Stellar Forum operates as both an institutional launching pad and a direct bridge to opportunity. We actively sponsor, mentor, and elevate driven individuals, providing them with a concrete platform to showcase their abilities to the world on their own terms. Beyond hosting our own specialized summits and initiatives, we actively pave the way and secure the necessary backing for these individuals to step directly into the high-stakes competitive and professional arenas where their skills deserve to be recognized. Ultimately, Stellar Forum exists to ensure that ambition and raw talent, not circumstance, determine how far a person can go.

“What was most significant about the lunar voyage was not that men set foot on the moon but that they set eye on the earth”

- Norman Cousins

Stellar Forum Summit

Stellar Forum Summit (SFS) is a full-scale, three-day operational simulation of space programs designed to replace traditional, repetitive conference formats with high-stakes, mission-critical execution. Attendees register into specific mission scenarios, such as establishing lunar outposts or executing deep-space sample retrievals, and operate within dedicated functional Units like Rocketry and Life Sciences. Over three days moving from Launch to Activity and final Success Criteria, every outcome is earned in real time through participant choices and collaborative problem-solving. Supported by a nine-department host team handling everything from logistics to narrative world-building, SFS provides a immersive, hands-on environment where ambitious minds test their skills in an intense, realistic space agency simulation.

The Big Bang Edition

The Big Bang Edition is the official first edition of the Stellar Forum Summit; the ignition point that sets the standard for everything that follows. Named to represent the starting point and explosive expansion of the summit, this edition introduces the foundational framework, custom mission tracks, and host operations for the entire SFS lineage. Because it is the inaugural run, it carries no pre-existing templates or rigid formulas; every department, simulation track, and operational pathway is built entirely from scratch to redefine what an immersive simulation can achieve.

**We are building something historic, and
we can't wait to see you there.**

3 DAY OVERVIEW

SFS runs across three days. Multiple Programs run in parallel throughout the summit, each with its own mission, its own Units, and its own outcome, so the event is not building toward a single result. What every Program shares is the same three-day rhythm, moving through the same three phases on the same schedule.

Day 1 Launch: each Program organizes and receives its mandate, and the first calls that shape that Program's mission are made.

Day 2 Activity: each Program's mission is in motion. This is where the real work, and the real complications, happen.

Day 3 Success Criteria: each Program's mission is judged on its own terms. Program's first two days converge into a final result.

This schedule reflects the three-day operational rhythm shared across all Stellar Forum Summit mission Programs. Every decision made during Launch on Day One directly influences the active simulation challenges of Day Two, ultimately converging into final success or scrub evaluations on Day Three. Track your assigned Unit timelines, remain adaptable to real-time mission complications, and prepare for a high-stakes, historic event.

Host Team

Hierarchy

This is the full chain of command on the host side of SFS, from the Administrator down to the people executing the work inside each department.

Administrator	Top of the host team. Holds the vision for SFS as a whole and carries final authority on direction, the role accountable for what SFS becomes as an event.
Deputy Administrator	Second-in-command across the entire host team. Runs operations when the Administrator is asleep and coordinates across all three Associate Administrators.
Associate Administrator: Internal, External, Operations	Each oversees three host departments, Internal covers HR, Socials & Shugal, and R&D; External covers Marketing, Outreach & PR, and Finance; Operations covers Logistics, Security, and Hospitality.
Director	Heads a single host department, one per department. Owns that department's output and reports up to their Associate Administrator.
Co-Director	Shares departmental leadership directly with the Director, one per department, splitting the workload of running it.
Team Lead	Heads a specific division within a department, for example, a Graphics Team Lead runs the graphics division inside Marketing.
Team Member	The department's on-ground contributors, the people actually executing the work inside each division.

Host Team

Departments

Nine departments each with a clear mandate and each reporting up through the hierarchy above to one of the three Associate Admins.

Human Resources	Recruits, onboards, and manages the wellbeing of the entire host team, the department that keeps every other department functioning.
Socials & Shugal	Designs the social and entertainment side of SFS, the evenings, the mixers, the moments attendees will actually talk about later on.
Research & Development	Builds the world of SFS, the space-agency theming, scene-setting, and simulation detail that makes this feel real rather than AI.
Marketing	Owns SFS's public voice, branding, social media, and the visual identity that gets this edition noticed before a single real convert.
Outreach & PR	Builds partnerships and external relationships, sponsors, guests, and institutional connections that give SFS credibility beyond its own walls.
Finance	Manages the budget end-to-end, what SFS can afford, where money goes, and what makes the entire summit financially possible.
Logistics	Handles the physical machinery of the event: venue coordination, seating, delegate kits, timing, and the operational details that decide whether three days run smoothly.
Security	Responsible for the safety and order of the venue throughout the summit, access control, crowd management, and emergency response.
Hospitality	The on-ground care team, welcoming and assisting every attendee, including Program leadership and invited guests, throughout SFS.

Closing Note

Thank you for taking the time to understand the vision behind what we're building.
